If you prefer quality:  
use detectors from the  
watchmakers of the world

For example: **Seismic Detector GM 3**

for maximum protection of safes and vaults:

- detects burglar attempts by any kind of tool from drill to oxygen lance
- no reaction to traffic or similar ambient vibrations
- easy installation and adjustment
- small dimensions
- tamper proof housing and connection cables

From Cerberus, the inventor and manufacturer of the world renowned ionization detector of the PYR-A-LARM system.

TELEDYNE GEOTECH

## meet the BLID and its family.

The BLID (Buried Line Intrusion Detector) is a unique advancement in outdoor security sensors. Unlike most other outdoor sensors, the BLID is designed for direct burial under any paved or unpaved surface providing total concealment. The BLID provides highly reliable detection in a broad spectrum of environments. Because the area of sensitivity can be closely controlled, the BLID can be effectively used in areas of high cultural activity. Local pressure changes created on the surface caused by a person or vehicle attempting to cross the buried line is converted into an alarm signal by the processing electronics. The BLID is one member of a complete family of sophisticated components consisting of other sensors, data encoding/transmission equipment, and decoding/display equipment. Zone identification is provided by a Sensor Transmitter which is a self-contained digital encoder designed to transmit, via wire line or VHF radio, a preselected binary-coded address message. Each Sensor Transmitter may be coded to one of 799 independent addresses. Alarm data are displayed by the Mini-Base Station which is a central terminal designed to accept messages from the sensor transmitter and is suitable for use in a wide variety of security systems. Features of the Mini-Base Station include a digital printer, audible alert, and a time-of-day display. An auxiliary Map Display is available.
